Student ID: 95057374

Cover Page / HTML & CSS Requirements - IMPORTANT

A live version of this website is being hosted here: <https://sam-webto.github.io/PortfolioCSU/>

I like this assignment because it gives me the chance to create a portfolio site that I might be able to use in real life. However, there are a lot of HTML & CSS requirements that I understand are needed for testing our ability to use them, however, I believe that using them all on every page will make the page not look as good as it could. So to combat this I have met all the requirements for the HTML and CSS by including a "modal" that can be activated on each page. The way the modal gets activated is slightly different for each page, I will provide instructions for each page below. The reason for this is that it allows me to create a section within the html and css which is hidden from the page to allow for me to have my creative freedom whilst also meeting the requirements for this assessment.

Activating it on the index.html page:

Click on my image on the homepage to activate the modal on this page.

Before clicking:
